

1.What's your proudest achievement? It can be a personal project or something you've worked on professionally. Just a short paragraph is fine, but we would love to know why you're proud of it.

Ans:

My proudest accomplishment would have to be when I helped develop a new technique at my job. We developed a technology called "Chat Bots".Which helps users can integrate messaging channel service(like Skype, what app, Facebook messenger into a single chatbot called enigage) into their application, it is best of its kind. With a span of one year, we have reached target.I am the one who has who done the channels into application.

2.Tell us about your passion? Tell us about a technical book or article you recently read, why you liked it, and why we should read it.

Ans:

As a software developer, I'm passionate about creating truly beautiful, efficient products to make people's experience with technology memorable.

An Era of Darkness: The British Empire in India:

One of the best books I've ever read! I have seen Tharoor's Oxford address a number of times, but this book was an eye-opener. Aside from the many examples of British travesty described so well (the destruction of the Indian textile, agriculture, steel, shipping, and handicrafts industries), the book gives an excellent insight into why post-Independence India is the way it is. For example, why our government bureaucracy is actually an impediment to the country's progress - it was created for a self-serving purpose, not for good governance. Or why our police services across states are feared by the common man but are ineffective as far as crime fighting is concerned - because the British police in India was never meant for crime fighting, they were meant to control the indigenous people through intimidation (although the author has not written about the law enforcement agencies during the British Raj, it is an interesting corollary one can draw). The past is the past, but one can draw a conclusion from this book that if India has to progress then there is a need to discard the British systems still in use in the country.

3.Tell us about why you are interested in Fluentgrid? What is that you know about our company and what you really like?

Ans:

Fluentgrid Ltd is now a CMMI Level 5 organization. Fluentgrid is a leading software products company offering smart grid and smart city solutions. Fluentgrid software products are well recognized globally. mPower suite of robust software products, extensive domain expertise and project execution ability to offer turnkey integrated solutions for transforming utilities and communities with lower TCO and faster RoI. It is from Asia to be featured on Gartner magic quadrants in smart utility and smart grid space. Based on requirement Fluentgrid updating their technology so it is improving my technical skills.
